

THE VIBE LOOP: ONE-PAGER

Follow it on every project. It's how you get it right on the first render.

#	STEP	YOU SAY	YOU CHECK
1	Brief	what, who, where, vibe, brand	Claude's questions answered
2	Beat table	"draft a beat table, don't render yet"	every second planned, 1 idea per row
3	Build	"build it"	—
4	Stills	"show me stills of each section"	layout, typos, safe zones, colours
5	Draft	"render a draft"	timing, pace, sound sync
6	Final	"render the final"	contact sheet of the final file
7	Export	"export for Reels, Shorts and YouTube"	sizes, loudness, file names

■ GOLDEN RULES

- Never approve what you haven't seen as stills.
- One change = one sentence with a timestamp.
- Keep every version (`_v1` , `_v2` ...). Never overwrite what a client has seen.
- All timings live in one file (`timeline.py`), so picture and sound never drift.
- Taste is your job. Keyframes are the AI's job.

DIRECT THE VIBE. LET AI DO THE KEYFRAMES.
