

AI FOOTAGE QC CHECKLIST

Check every generated clip before it goes near the timeline.

■ REJECT OR CUT AROUND

- [] Hands: extra/missing fingers, melting, merging with objects
- [] Faces: identity changes, warping eyes/teeth, uncanny smiles
- [] Text: garbled signs, fake logos, nonsense UI on screens
- [] Physics: objects passing through each other, popping in/out
- [] Geometry: bending walls, wobbly straight lines
- [] Flicker: colour or brightness pumping
- [] Dissolves *inside* a clip (sudden morph to another scene)
- [] The last 0.5–1 s (often degrades or freezes)
- [] Generator watermark (export a clean version from your plan; don't strip it)

■ FIX TOOLBOX

PROBLEM	FIX
flaw mid-shot	split around it, or cover with a cut-away
garbled screen text	crop past it, defocus it, or rebuild as a real UI graphic
fake logo	replace with the real logo graphic
jitter	stabilise that shot
too short	slow to 0.7× (optical flow) or freeze + push-in
mismatched looks	one grade + grain on everything

■ THE "NOT AI" FINISH

- Shots 1.5–4 s; vary the lengths
- One grade, same strength, subtle grain, light vignette
- All text/logos/numbers = real graphics
- Ambience + foley-like SFX + music
- Mix in real photos/footage where possible

■ RIGHTS

- [] Generated on a plan that allows commercial use
- [] People/brands depicted: permission or clearly fictional
- [] Music and voice licensed or generated

DIRECT THE VIBE. LET AI DO THE KEYFRAMES.
